

Brother MFC-L2750DW — Unit Condition Summary

Serial Number: U64988D4N398946

Manufactured: April 2024

Total Page Count: 6,404 pages

Usage Summary

This printer has accumulated approximately **6,400 lifetime pages**, representing relatively light use for a business-class monochrome laser printer.

Using Brother's approximately **50,000-page device-life reference** for this platform as a comparison, the recorded page count represents approximately **13% of that reference**.

The printer was manufactured in **April 2024**, making it a relatively recent production unit with a low lifetime page count.

The current Printer Settings report shows an average historical print coverage of approximately **2.4%**, consistent with relatively light document and text printing.

Usage History

The internal counters indicate predominantly light business/office use:

- Approximately **6,400 lifetime pages**
- Only **49 duplex pages**

- Less than **1% of lifetime output** used duplex printing
- **4 recorded paper jams** over the printer's lifetime
- No recorded rear jams
- No recorded duplex jams

The duplex mechanism therefore shows very little historical use.

Consumable History

The printer's internal history records:

- **5 toner cartridge replacements**
- **2 drum replacement/reset events**

The printer was received with a used drum and toner assembly that produced poor print quality and generated a Drum ! warning.

The previous drum and toner assembly was removed.

New Drum and Toner

The printer has now been serviced with:

- **New compatible DR-730 drum unit**
- **New compatible high-yield toner cartridge**

These are new aftermarket/compatible consumables rather than genuine Brother components.

The drum replacement procedure has been completed and the printer currently reports:

- **Drum Life: approximately 100%**
- **Toner Life: approximately 100%**

Print quality after installation of the new drum and toner is ****clean and good****.

Current Condition

The printer has been cleaned and functionally tested.

Printing, scanning, automatic document feeding, and general printer operation have been tested successfully.

Current print quality is clean and consistent.

The exterior shows normal cosmetic signs of previous business use, including minor scratches and scuffs. Major plastic components, covers, trays, and functional parts are intact.

Overall Assessment

Light previous business use / good current functional condition.

This is a relatively recent **April 2024 production unit** with only approximately **6,400 lifetime pages**.

Its lifetime page count represents approximately **13% of Brother's referenced 50,000-page device-life figure** for this platform.

The internal history indicates relatively light usage:

- Approximately **6,400 lifetime pages**
- Approximately **2.4% average print coverage**
- Less than **1% duplex usage**
- Only **4 recorded paper jams**
- No recorded duplex jams
- New compatible DR-730 drum
- New compatible high-yield toner

- Drum and toner currently reporting approximately **100% remaining life**
- Clean current print quality

The previous drum and toner assembly was replaced, and a post-service Printer Settings report confirms the new drum status and current lifetime counters.

Overall, this unit shows relatively low historical usage and is currently operating normally with new drum and toner consumables installed.
